

Uganda supports the largest known populations of critically endangered Nubian giraffe (*Giraffa camelopardalis camelopardalis*).

Since 2013, the Giraffe Conservation Foundation (GCF) has partnered with the Uganda Wildlife Authority (UWA) to monitor and conserve these globally significant Nubian giraffe populations.

Through a series of ambitious conservation translocations, UWA and GCF have expanded the range of Nubian giraffe in the country from only two populations in 2014 to five populations today and effectively increased and augmented their range by >1.5 million acres in the country.

GCF continues to monitor all giraffe populations in Uganda using individual based photographic surveys, which rely on pattern recognition software to identify every surveyed giraffe by its unique spot pattern.

The UWA-GCF mobile veterinary unit in Murchison Falls National Park continues to de-snare wildlife and to undertake regular snare sweeps, community education and outreach together with Snares2Wares.

These targeted conservation efforts have collectively contributed to an increased giraffe population in the country year-on-year.

NUBIAN GIRAFFE IN NUMBERS

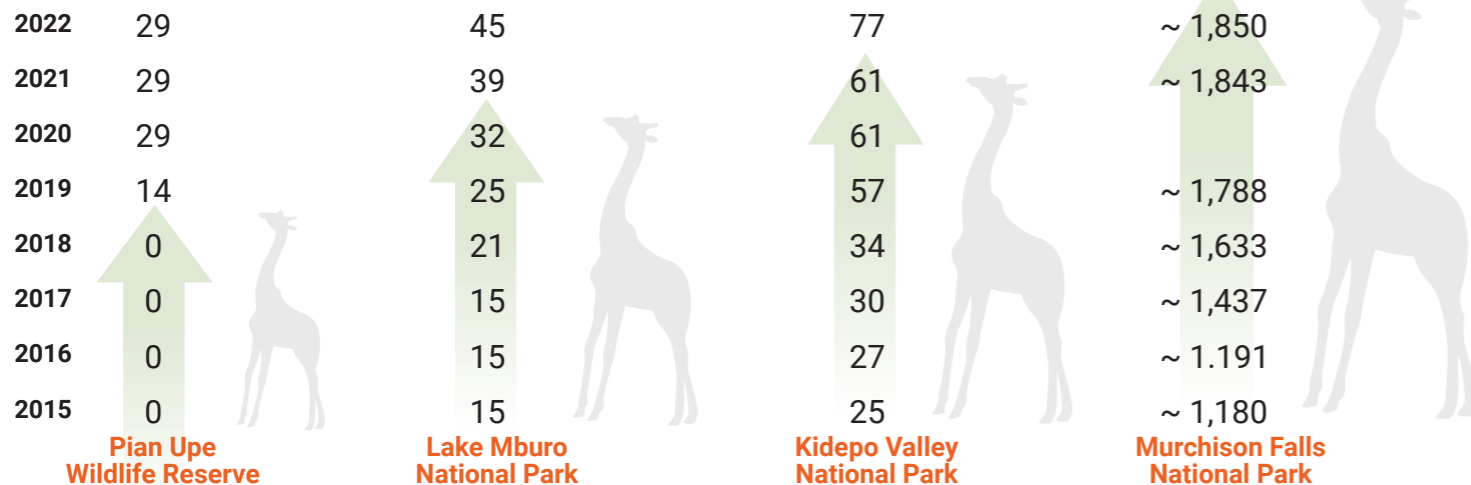

Nubian giraffe populations: **5**

Total number of Nubian giraffe: **~ 2,000**

Total survey days per year: **80**

Total area surveyed: **7,610km²**

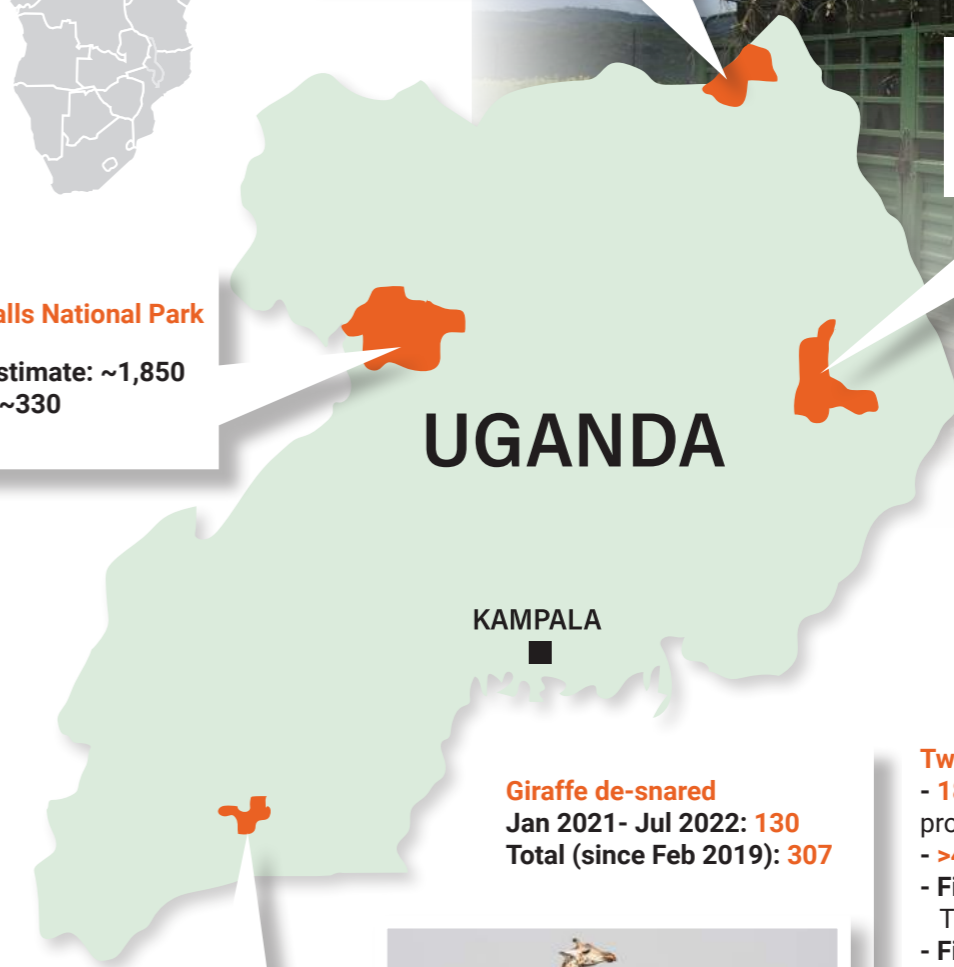

GIRAFFE NUMBERS OVER THE YEARS

Murchison Falls National Park (North & South)
Population Estimate: ~1,850
New Calves: ~330

Kidepo Valley National Park
Population: 77
New Calves: 13

Pian Upe Wildlife Reserve
Population: 29
New Calves: 0

KAMPALA

Giraffe de-snared
Jan 2021- Jul 2022: 130
Total (since Feb 2019): 307

Lake Mbuoro National Park
Population: 45
New calves : 5

Twiga Tracker

- 18 giraffe tracked in 3 different protected areas.
- >4,500 data points recorded
- First deployment of Ceres Trace tag in Uganda.
- First every deployment of Ceres Wild tag on giraffe.
